FOR IMMEDIATE RELEASE: May 4, 2020

SES Solar Co-operative & CNH Industrial spark partnership to install largest solar array in urban Saskatchewan

SASKATOON, May 4, 2020 — Building off an array of successful installations, Saskatchewan's first solar power co-operative has partnered with CNH Industrial to build its largest project to date. The SES Solar Co-op is now selling shares for the installation of over 1000 solar panels which will contribute to the power needed on the CNH Industrial site on 71st street in Saskatoon.

Solar technology is now rivalling its non-renewable counterparts. By harnessing the potential of solar, SES Solar Co-op's projects create a sustainable energy source, offset greenhouse gas emissions from fossil fuel generated electricity, and provide a return on investment – all at the same time.

CNH Industrial is one of the world's largest manufacturers of industrial goods, from tractors, combines and construction equipment, to trucks and buses, as well as powertrain solutions. The company has a demonstrated record of commitment to energy efficiency and sustainability in their operations. The CNH Industrial Saskatoon plant produces planters, seeders, combine heads, cultivators and air carts under the Case IH and New Holland brands. They have been a member of the SES Solar Co-op since December 2015.

"Sustainability initiatives are embedded in all areas of CNH Industrial's business and we have been Industry Leader in the Dow Jones Sustainability Indices for nine consecutive years." says Seth L'Hoir, CNH Industrial, Saskatoon plant manager. "We are proud to be part of the Saskatchewan renewable energy movement to create a better and greener tomorrow."

"Thanks to the ongoing support of our members, the SES Solar Co-op has played a significant role in the growing movement in Saskatchewan towards a renewable energy tipping point. In this sunny province, we have the greatest solar resource in the country, providing us with a world-class opportunity to build resilience into our energy infrastructure for ourselves and future generations." says Vice President, Michael Nemeth.

The panels purchased for our newest project will reside on the CNH Industrial site producing renewable energy for their operations and generating a return for SES Solar Co-op shareholders. Once the array is in place, investors can see their dollars at work along 71st Street. Being a member of the SES Solar Co-op means individuals are directly contributing to the expansion of renewable energy development in Saskatchewan.

The Solar Co-op is now inviting the public to invest in this project by purchasing preferred shares.

Join us along with our community partners for an online press conference on Wednesday, May 6th at 10am. For more information and a meeting link visit www.sessolarcoop.ca.
