

SES SOLAR
CO-OPERATIVE

Be a part of a bright future!

When you purchase shares from the SES Solar Co-op you are joining 250+ others pooling our resources to invest in solar projects, creating sustainable energy, offsetting greenhouse gas emissions and creating a return on investment.

Our next project is a significant undertaking that will roughly double our currently installed solar capacity at the CNH Industrial plant on 71st Street, Saskatoon. In 2020, the SES Solar Co-operative partnered with CNH Industrial to install a 400 kW solar system. Our new 392 kW DC project will expand upon this installation, providing about 12% of the total electricity used at the plant and reducing greenhouse gas emissions by an additional 300 tonnes carbon dioxide equivalent annually.

This project continues our track record of innovation and provincial firsts. Like our previous project in this location, this expansion is another 'behind-the-meter' installation whereby all the electrical energy produced is used on site. The expansion will also make our members the owners of the largest urban solar installation in the province. Our co-operative continues to stand out as a leader, demonstrating the potential of renewable energy on an unprecedented scale.

Construction on our eighth project is currently underway and expected to be finalized in October. With the successful completion of our eighth project, our members will collectively own eight solar installations generating 975 kW of power at peak production.

This is your chance to be a part of a bright future - for a limited time only we have shares available for purchase. Shares are available at a fixed price, can be purchased as an individual or group, and pay dividends to members.
