

SES SOLAR
CO-OPERATIVE

A Health Co-op - A Strong Future

Our co-operative has had the opportunity in the last year to double its production. As a result, the second phase of the array at CNHi began producing power in late 2023. This array will produce clean energy for 25 years or more and will bring in revenue through our leasing model continuously over that time. As the cost of energy goes up, so does our revenue from our energy producing arrays. A strong indicator of our future financial health.

This year, as we invest in our energy production, we have also launched a share offering to help to generate the funds needed to pay for this equipment. All of the expenses to build the array have been accrued and paid for in the last 12 months. This year, your Solar Co-op investment is being used to grow our capacity, both for energy production and for future dividends. The Solar Co-op will return to positive income generation in 2024. Dividends will return when our financial position is cash positive. T5s will not be issued for the 2023 year.

If you have any questions, feel free to email our admin team.

We're installing solar technology to make a brighter future for our province - powered by people like you.

The future is bright!
