

SES SOLAR
CO-OPERATIVE

Sunny April News!

Our Solar Coop continues to thrive and grow. We are delighted to announce that our share offering which opened in April 2023 has been extended.

This offering, which is in support of our completed installation at the Case New Holland site, is our largest offering to date. We have sold approximately half of the available shares with the support of our current membership. Having surpassed the regulating body's requirement for sales, we were able to apply for and receive approval to extend the share offering.

Every share helps us to become a stronger organization with the capacity to reach more members and encourage further investment in the solar energy future. Solar energy investment reduces greenhouse gas emissions, builds community capacity in the green energy transition and offers financial dividends to members.

Our project's team works continuously finding partners interested in providing for their energy needs using renewable energy. We are always looking for partners with the following characteristics:

- Like-minded partner with anticipated long-term site ownership
- High-tier electricity rates of the building to maximize savings from solar power
- Good rooftop surface or ground area to accommodate a 25-year project
- Good structural condition of the roof or ground condition
- Good sunlight access
- Easily visible by the public
- Straightforward solar panel layout that allows for a low-cost system
- Low chance of vandalism or damage.
